

Butrint Pllana

Frontend Engineer | React | JavaScript | TypeScript

butrint.pllana@gmail.com | 045-286-424 | Vushtrri, Kosovo | [linkedin.com/in/butrint-pllana](https://www.linkedin.com/in/butrint-pllana) | github.com/butrintpllana

PROFESSIONAL SUMMARY

Frontend Engineer with a track record of owning greenfield products end-to-end — from architecture decisions to production delivery — across multi-product environments in humanitarian, advisory, and enterprise sectors. Specializes in React, configuration-driven systems, scalable component architecture, and REST API integration. Recognized for technical leadership: stepped into a Project Manager role while maintaining full frontend ownership, coordinating cross-functional teams using Agile and Scrum. Builds with a product mindset — every technical decision tied to a user outcome.

CORE ACHIEVEMENTS

- Architected a runtime rule engine and schema-driven state system in React that powered a production survey platform used by internal teams, external organizations, and public respondents — eliminating a recurring class of data integrity bugs and reducing estimated DOM load by 30-40% through lazy rendering.
- Initialized and delivered a greenfield field monitoring system from zero to production in 12 months, replacing Excel-based data collection for teams tracking approximately 700 site visits per project cycle — while simultaneously leading Agile delivery as appointed Project Manager across 10-15 developers.
- Sole frontend developer on a client-facing file management system delivered in under 5 months, implementing role-based access control, time-based file expiration logic, and a full responsive UI without a designer — shipped to production for a network infrastructure company.

PROFESSIONAL EXPERIENCE

KS-APS | Kosovo Advisory Products & Systems Frontend Engineer

Pristina, Kosovo
March 2023 – March 2026

KAPsurvey - Dynamic Survey & Form Builder

- Architected a configuration-driven runtime rule engine supporting nested conditional logic, multi-path branching, and dynamic question visibility — enabling survey creation without codebase changes per new flow, serving internal teams, external organizations, and public users from a single responsive codebase.
- Re-architected form state using React Context with a schema-driven model (value, visibility, validation per question), resolving cascading invalidation bugs that had required manual QA intervention and reducing estimated initial DOM load by 30-40% via lazy rendering of conditional groups.
- Integrated REST API data layer and conducted code reviews to maintain component quality and state logic consistency across the team.

TPMready - Field Monitoring System

- Initialized greenfield frontend architecture and led technical delivery of a humanitarian field monitoring platform — replacing Excel-based workflows for teams logging approximately 700 site visits per project cycle, with full cross-browser compatibility and responsive design across field devices.
- Built a real-time KPI dashboard with REST API integration, interactive maps, visit heatmaps, distance calculations, and route navigation — applying code splitting and lazy loading to reduce estimated bundle load time by 25% for users on slower connections.
- Appointed technical lead and Scrum master alongside frontend role: coordinated 10-15 developers across parallel products, ran sprint planning, managed evolving stakeholder requirements over a 12-month delivery cycle, and drove full user adoption from an Excel-resistant workforce.

KAPorg - Organizational Assessment Platform

- Designed a shared React component architecture supporting self-directed and facilitator-guided assessment modes from a single codebase — dynamic question renderer, unified state model, configurable flow system — with no logic duplication across modes.
- Replaced manual spreadsheet-based evaluation processes across governance, HR, finance, and compliance domains with a structured, REST API-driven assessment system.

KAPcourse - E-Learning Platform

- Integrated Stripe payment processing alongside existing PayPal and self-enrollment flows on a Moodle-based training platform, unlocking a new monetization channel for the organization.

GNetz | Freelance Client Project

Sole Frontend Developer

Remote
July 2025 – November 2025

File Management System - Network Infrastructure Client

- Delivered a production file management system as sole frontend developer on a 2-person team in under 5 months — built with React and TypeScript, replacing an off-the-shelf cloud storage solution with a security-controlled, role-based platform.
- Implemented time-based file expiration (quick presets and advanced date ranges), frontend RBAC with protected routing, and a fully responsive UI across devices — designed independently using AI-assisted prototyping without a dedicated designer.
- Coordinated REST API integration with backend, ensuring consistent state lifecycle management for active and expired file states across all user roles.

Primex

Software Developer Intern

Fushe Kosove, Kosovo
October 2022 – December 2022

- Built frontend features for an e-commerce platform and internal tools using Vue.js, PHP/Laravel, and Bootstrap — gaining exposure to full-stack workflows and cross-browser compatibility practices.

PERSONAL PROJECTS

Sales Manager - Construction Sales Tracking Platform

React | TypeScript | .NET Core | MSSQL

- Independently scoped product requirements and designed full frontend architecture for a construction sales tracking tool — client management, project registration, unit tracking, and multi-model payment flows (monthly, yearly, prepaid) — built with React and TypeScript.
- Delivered a calendar-based installment dashboard surfacing near-due and overdue payment alerts per building and unit, replacing manual spreadsheet tracking for sales teams.

TECHNICAL SKILLS

Core: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks: React.js, Next.js, Angular, Vue.js

Styling: Tailwind CSS, Ant Design, Bootstrap 5

State & Data: React Context, Zustand, React Query, React Hook Form

Testing: Jest, React Testing Library

Tooling: Git, GitHub, Vite, VS Code, Figma, Jira, ClickUp

Backend Familiarity: PHP / Laravel, .NET Core, MSSQL

EDUCATION

University of Business and Technology (UBT)

2018 – 2021

Computer Science and Engineering | Specialization: Web Development

LANGUAGES

Albanian: Native **English:** Fluent
